Wahlpflichtmodule mit 6 LP können durch zwei Wahlpflichtmodule mit je 3 LP ersetzt werden

Der Arbeitsaufwand einer Projektarbeit umfasst ca. 120 Stunden studentischen Arbeitsaufwand und wird durch ein Seminar begleitet. Das Projektmodul umfasst damit ca. 360 Stunden studentischen Arbeitsaufwand.

**Pflichtmodule**

Dielectrics and Ceramics

Macromolecular Chemistry and Polymer Application

Solid State Physics and Semiconductors

**Wahlpflichtmodule I**

Advanced Inorganic Chemistry

Advanced Organic Materials

Advanced Physical Chemistry

Aerosol- and Nanotechnology

Analytics of Plastics and Polymers

Batterieproduktion

Biomedical Materials

Business Simulation

Chemical Nanotechnology

Chemical Sensors

Chemical Technology of Materials

Engineering Now

FEM zur Entwicklung von MOEMS

Fortgeschrittene Energiespeichertechnologie

Halbleitertechnologie zur Entwicklung von MOEMS

Hazardous Substances: Regulations and Risks (Gefahrstoffkunde)

Incoherent Light Sources

Innovative Materials

Lasermaterialbearbeitung

Laserphysik

Life-Cycle Assessment

Membrane Separations

Microscopy/Surface Science

Modern Crystallographic Methods

Optical and electrical characterization of Materials

Particle Technology

Project Management

Quantensensoren

Quantum Statistical Physics

Technology of Coatings

**Wahlpflichtmodule II\***

Arbitrary Module

Bridging Course Basics of Physics

Chemistry for Engineers

German as a foreign language or Intercultural Communication and Competence

Photovoltaische Systeme

**Projektarbeiten**

Anmerkung für den Wahlpflichtbereich II: Über den Zugang zu den Lehrangeboten sowie die Anerkennung extern erbrachter Leistungen entscheidet der Prüfungsausschuss im Einzelfall unter Berücksichtigung der Vorkenntnisse

## MODULE MASTER Materials Science and Engineering PO 2021

The courses for the elective modules are subject to continuous updating and expansion. The courses offered are updated at the beginning of each semester and announced on a notice board. Note: (Change to current examination regulations: The module "Analytics of Materials" was replaced by the modules: "Analytics of Plastics and Polymers and "Optical and Electrical Characterization of Materials". Statistical Physics was replaced by Quantum Statistical Physics, new Modules: Chemical Sensors, Bridging Course Basics of Physics, Innovative Materials, Halbleitertechnik, FEM zur Entwicklung von MOEMS, Fortgeschrittene Energiespeichertechnologie, Arbitrary Module, Advanced Organic Materials, Halbleitertechnik= Halbleitertechnologie zur Entwicklung von MOEMS.

Modul	Pflicht/Wahl Compulsory/ elective	Chemie- Wahl/ Chemistry -Elective	Physik- Wahl/ Physics- Elective	Sose	WS	LP/ CP	Sprache Language	Modulverantwortlicher/ Dozent
Advanced Inorganic Chemistry		X			X	6	Engl.	Kynast, Jüstel
Advanced Organic Materials		X	X	X		6	Engl.	Schäferling

<b>5 5.1 Intended learning outcomes</b> (What should students be able to do after having accomplished the module? Does the module provide the opportunity to acquire soft skills in addition to professional knowledge? For which other modules and prospective tasks in the labour market are the acquired knowledge and skills relevant?)  <p>After completion of the module, the students can outline the change the interpretation of chemical bonds has taken in progressing from valence bond to molecular orbital theory. They can safely assign molecular symmetry, apply the basic concepts of group theory to obtain symmetry adapted molecular orbitals and predict vibrational and electronic spectra for inorganic molecules and complexes. They can demonstrate an essential understanding of stability and reaction mechanisms of organometallic compounds and catalytic cycles based on these. Founded on this background and fellow students' presentations on the subjects, they can explain the theoretical background of practical examples like an "Organic LED (light-emitting diodes)" or "Graetz Cell". Further presentations and lab courses executed by the students will support the ability to assess contemporary problems in inorganic chemistry and close-by disciplines.</p>																																										

## 5.2 Course content

### Symmetry:

Symmetry elements, symmetry of molecules, point groups, character tables, transformations, Mulliken symbols. Implications for orbitals / electronic states and spectroscopy.

### Vibrational spectra:

Harmonic oscillator, inharmonicity, selection rules, dipole moment, polarizability, IR vs. Raman activity, spectra, vibrational coupling, group frequencies, use of symmetry and character tables in spectra prediction and limitations.

### Basics of Molecular Orbitals:

Overlap integral and orbital symmetry / orbital energy, correlation diagrams of molecules and transition metal complexes, charge transfer, angular overlap.

### Electronic spectra:

Selection rules, d-d spectra, charge transfer spectra, revisit of spectrochemical series

### Vibrational spectra:

Harmonic oscillator, inharmonicity, selection rules, overtones and combination modes, dipole moment, polarizability, iractivity, Raman effect, linear and non-linear molecules, coupled vibrations, Fermi resonance, use of symmetry, expectation spectra for simple molecules, limitations of predictability, group frequencies

***"The organometallic part is optional for Master students in Materials Science."***

→ details can be found in course syllabus, recommended study plan etc.

**5.3 Short information about module** (This paragraph [max. 250 characters] will be published on the website of FH Münster to support persons interested in studying at FH Münster to choose the appropriate study programme. Please focus on the main intended learning outcomes and course content, ideally also comprising information about the relevance of the module for the further course of study and the labour market. Please formulate whole sentences, address your (prospective) students directly and avoid technical terms.

It is important to solve problems from spectroscopy, molecular orbitals and organometallic chemistry. Therefore, you will become familiar with the recent and present progress in inorganic chemistry.

**6.1 Prerequisites** (*formal*: examination of module XY has to be passed or similar *content-wise*; *module XY should have been attended, the following knowledge and skills should have been acquired*: ....)

Bachelor's degree in chemical engineering, Chemistry or closely related

**6.2 Requirements for awarding credit points** (e.g. passing final examination, successful accomplishment of assignments in the course of study, regular active participation)

Written report on laboratory experiments, oral presentation of assigned subject and successful examination.

Praktikumsnachweis in Form von Protokollen, Präsentation eines zugewiesenen Themas aus der Anorganischen Chemie und Bestehen der Prüfung.

**6.3 Type and extent of examination** (e.g. written exam, oral exam, term paper, presentation, portfolio, duration of examination in minutes)

Oral presentation on inorganic subject as assigned  
Exam (180 minutes) or oral examination

**6.4 Requirements for admission to examination**

Complete participation in the required laboratory work and approval of the associated reports.  
Enrollment in the programme, registration for the examination (via LSF).

	<p>6.5 Weighing of module grade when calculating final grade see examination regulations for aforementioned study programmes (line 3).*</p> <p><small>*You will find the examination regulations of all study programmes in the official announcements of the FH Münster: <a href="https://www.fh-muenster.de/hochschule/aktuelles/amtliche_bekanntmachungen/index.php?p=2,7">https://www.fh-muenster.de/hochschule/aktuelles/amtliche_bekanntmachungen/index.php?p=2,7</a>.</small></p>
7	<p>7.1 Languages used in the module: <input type="checkbox"/> German <input checked="" type="checkbox"/> English <input type="checkbox"/> others, namely:</p>
	<p>7.2 Contact person for module: Prof. Dr. Kynast</p>
	<p>7.3 Professors (optional) Prof. Dr. Kynast</p>
	<p>7.4 Maximum number of participants (optional)</p>
	<p>7.5 Further information (optional) (e.g. literature recommendations, other persons involved, etc.)</p> <p>Lecture notes, tables, data (as made available on the net) G.L. Miessler, D.A. Tarr, "Inorganic Chemistry" Excerpts from J.Weidlein, U.Müller, K.Dehnicke, "Schwingungsspektroskopie" (provided) Articles from Journals: „Inorganic Chemistry“, „Chemie in unserer Zeit“ (college licenses), „Chemical Education“ (provided)</p>

7	<b>Learning outcomes:</b> After attending this module students can assess which types of organic materials can be applied in current optoelectronic and nano-technologies and how these can replace typical inorganic materials such as metals, semiconductors, glasses or crystals. The students will understand the composition and functionality of different types of organic materials beyond classical polymers including conducting oligomers and polymers, liquid crystals, polyelectrolytes, polymer electrolytes, responsive polymers and materials for polymer electronics and additive manufacturing (3D printing). Students can recognize current and future application areas of these materials and explain their impact on light emitting devices, flat displays, solar cell or electrode materials, organic transistors and nanotechnology. On the basis of exercises the students will review their learning progress, discuss examples and new developments from the current literature and compare different technologies. An excursion to Evonik Industries in Marl will complete the course.

<b>5 5.1 Intended learning outcomes</b> (What should students be able to do after having accomplished the module? Does the module provide the opportunity to acquire soft skills in addition to professional knowledge? For which other modules and prospective tasks in the labour market are the acquired knowledge and skills relevant?)  <p>After having attended the module, the students will be able to reformulate and characterize complex polymer additive mixtures. By carrying out polymer additive analysis employing different techniques of extraction, of chromatographic separation and several analytical spectroscopic and mass spectrometric characterization techniques the students will be able to estimate which instrumental techniques and analytical approaches are required to solve problems in the plastic product lifecycle including research-, development-, production-, and inservice to perform. By writing reports and giving oral presentations on the basis of the experiments performed, students will be put into the state to structure own findings and prepare concise presentations of them.</p>																																												

By developing theoretical approaches how to solve real problems connected to polymer additive challenges in different stages of the polymer lifecycle the students will apply and solidify their knowledge.

## 5.2 Course content

### Characterization of plastics

Plastic formulations and the role of additives, key properties of important polymer additives, stability and degradation of additives, factors affecting polymer additive analysis, judgment of analytical results in relation to the analytical approach (sample preparation, instrumental techniques employed, etc.), Additive and environmental or toxicological challenges, deformation principles, sample preparation, extraction strategies, conventional extraction technologies (liquid-solid extraction, sonification, soxhlet, soxtec, soxtherm), high pressure solvent extraction methods (supercritical fluid extraction, microwave technology, microwave assisted extraction, pressurized fluid extraction).

### Instrumental analytical and chromatographic separation techniques employed in polymer-additive analysis

GC-MS, Headspace and Pyrolysis-GC-MS, EGA-GC-MS, HPLC-UV and HPLC-MS, TLC, XRF, Laserablation ICP-MS.

→ details can be found in course syllabus, recommended study plan etc.

5 **5.3 Short information about module** (This paragraph [max. 250 characters] will be published on the website of FH Münster to support persons interested in studying at FH Münster to choose the appropriate study programme. Please focus on the main intended learning outcomes and course content, ideally also comprising information about the relevance of the module for the further course of study and the labour market. Please formulate whole sentences, address your (prospective) students directly and avoid technical terms.

In order to know how to deformulate and characterize a complex polymer additive mixture and estimate your findings, you will learn the about use of additives in polymer formulation in order to tailor properties and learn various methods of extraction, chromatographic separation and analytical characterization based on instrumental polymer analysis as well as judging the results and estimate the information you can gain employing different analytical approaches.

6 **6.1 Prerequisites** (*formal*: examination of module XY has to be passed or similar content-wise; *module XY should have been attended, the following knowledge and skills should have been acquired*: ....)

Bachelor's degree in applied chemistry or Chemical Engineering, Chemistry or closely related

**6.2 Requirements for awarding credit points** (e.g. passing final examination, successful accomplishment of assignments in the course of study, regular active participation)

Proof of lab work and pass the exam.

**6.3 Type and extent of examination** (e.g. written exam, oral exam, term paper, presentation, portfolio, duration of examination in minutes)

Written (3 hrs) or oral (30 - 45 min) at the end of the semester

**6.4 Requirements for admission to examination**

Enrollment in the programme, registration for examination (via LSF)

**6.5 Weighing of module grade when calculating final grade**

see examination regulations for aforementioned study programmes (line 3).\*

\*You will find the examination regulations of all study programmes in the official announcements of the FH Münster: [https://www.fh-muenster.de/hochschule/aktuelles/amtliche\\_bekanntmachungen/index.php?p=2,7](https://www.fh-muenster.de/hochschule/aktuelles/amtliche_bekanntmachungen/index.php?p=2,7).

<b>5 5.1 Intended learning outcomes</b> (What should students be able to do after having accomplished the module? Does the module provide the opportunity to acquire soft skills in addition to professional knowledge? For which other modules and prospective tasks in the labour market are the acquired knowledge and skills relevant?)  <p>This elective <i>Arbitrary Module</i> is part of the field Electives-II. Any module supplied by one of the master programs at the University of Applied Sciences Münster can be selected if it is related to the field of material science. This is decided by the examination board.</p> <p>The student must apply for admission of the respective module at the examination board of the master <i>Material Sciences and Engineering</i>.</p>																																																																																																																																																																																																																																												

**Students may consider the following points:**

The examination board does not guarantee that an overlap of that selected module and regular modules is avoided.

The students have to care for the organization of lectures and respective examinations by their own. The student must contact the relevant professor and ask for permission to take this relevant course and the examination.

**5.2 Course content**

→ details can be found in course syllabus, recommended study plan etc.

**5.3 Short information about module** (This paragraph [max. 250 characters] will be published on the website of FH Münster to support persons interested in studying at FH Münster to choose the appropriate study programme. Please focus on the main intended learning outcomes and course content, ideally also comprising information about the relevance of the module for the further course of study and the labour market. Please formulate whole sentences, address your (prospective) students directly and avoid technical terms.

**6.1 Prerequisites** (*formal*: examination of module XY has to be passed or similar content-wise; *module XY should have been attended, the following knowledge and skills should have been acquired*: ....)

**6.2 Requirements for awarding credit points** (e.g. passing final examination, successful accomplishment of assignments in the course of study, regular active participation)

**6.3 Type and extent of examination** (e.g. written exam, oral exam, term paper, presentation, portfolio, duration of examination in minutes)

**6.4 Requirements for admission to examination**

**7.1 Languages used in the module:**  
☐ German ☐ English ☐ others, namely:

**7.2 Contact person for module:**

**7.3 Professors (optional)**

**7.4 Maximum number of participants (optional)**

**7.5 Further information (optional)** (e.g. literature recommendations, other persons involved, etc.)

<b>1 1.1 Title of module (GER / ENG)</b>  <b>Basics in Physics</b>	<b>1.2 Short description (optional)</b>	<b>1.3 Module code (from HIS-POS)</b> <b>(Cams/ MyFH)</b> <b>PHY.2.0107.0</b>

<b>5 5.1 Intended learning outcomes</b> (What should students be able to do after having accomplished the module? Does the module provide the opportunity to acquire soft skills in addition to professional knowledge? For which other modules and prospective tasks in the labour market are the acquired knowledge and skills relevant?)  <p>Nach der Teilnahme an dem Modul sind die Studierenden in der Lage die Grundlagen der Batteriezellproduktion wiederzugeben und eigenständig in den einzelnen Elementen der Batteriezellproduktion strukturiert unterstützend mitzuarbeiten. Im Rahmen der Vorlesungen erlernen sie den theoretischen Produktionsprozess inklusive aller Bestandteile, Materialien und Prozessschritte kennen. Im Rahmen des Praktikums können sie das erlernte Wissen in der Praxis umsetzen und im Rahmen des konkreten Aufbaus der Gigafactory der Fraunhofer Forschungsfertigung Batteriezzelle FFB unterstützend begleiten. Im Anschluss sind die Studierenden in der Lage, die erlernten Produkt- und Prozessschritte auf mögliche Berufs- und Anwendungsfelder in ähnlichen Umgebungen zu adaptieren.</p> <p>After participating in the module, the students are able to reproduce the basics of battery cell production and to work independently in the individual elements of battery cell production in a structured supportive manner. During the lectures they learn the theoretical production process including all components, materials and process steps. During the internship, they are able to put the knowledge they have gained into practical and provide support to the Fraunhofer Forschungsfertigung Batteriezzelle FFB during the actual construction of the Gigafactory. The students will then be able to adapt the product and process steps they have learned to possible professional and application fields in similar environments. Afterwards, the students are able to adapt the learned product and process steps to possible occupational and application fields in similar environments.</p>																																												

	<p><b>5.2 Course content</b></p> <p>Im Rahmen der Vorlesung werden die Grundlagen der Batteriezellproduktion sowie Grundlagen des Batteriezellaufbaus vermittelt. Des Weiteren werden Möglichkeiten der Digitalisierung in der Zellproduktion sowie der digitalen Fabrikplanung thematisiert. Abschließend (ggf. parallel zum bereits stattfindenden Praktikum) werden auch Management-Themen (Innovations-, Technologie-, Nachhaltigkeits-, Qualitäts-, und Produktionsmanagement) aufgegriffen. Zusammenfassung der relevantesten Themen: Grundlagen der Batteriezell(produktion), Digitalisierung in Batteriezellfertigung, Management der Batteriezell(produktion)</p> <p>In the course of the lecture, the basics of battery cell production as well as the basics of battery cell design are taught. Furthermore, possibilities of digitalization in cell production as well as digital factory planning will be addressed. Finally (possibly parallel to the internship already taking place), management topics (innovation, technology, sustainability, quality, and production management) will also be addressed. Summary of the most relevant topics: Basics of battery cell (production), Digitalization in battery cell production, Battery cell (production) management.</p>
	<p><b>5.3 Short information about module</b> (This paragraph [max. 250 characters] will be published on the website of FH Münster to support persons interested in studying at FH Münster to choose the appropriate study programme. 5 5.1 Intended learning outcomes (What should students be able to do after having accomplished the module? Does the module provide the opportunity to acquire soft skills in addition to professional knowledge? For which other modules and prospective tasks in the labour market are the acquired knowledge and skills relevant?)								
<p>This course is an introduction to biomedical materials and their applications.</p> <p>Students will be able to</p> <ul style="list-style-type: none"> <li>identify different biomedical materials and transfer their knowledge to the various applications,</li> <li>write scientific texts using the correct terminology and outline complex subject matter in presentations,</li> <li>describe biomedical materials and investigate analytically their properties in a laboratory class.</li> </ul>								

The laboratory class encompasses a) practical lab-work including written lab-reports and b) written essays to current topics of the field.

Dieses Modul gibt eine Einführung in biomedizinische Materialien und deren Anwendungsbereiche.

Die Studierenden können

- biomedizinische Materialien dem Kontext entsprechend einordnen und auf unterschiedliche Anwendungsbereiche transferieren,
- wissenschaftliche Texte schreiben und in Präsentationen komplexe Sachverhalte darstellen,
- im Praktikum den Umgang mit verschiedenen biomedizinischen Materialien erproben und deren Eigenschaften untersuchen.

Das Praktikum beinhaltet a) praktische Experimente mit zugehörigen Protokollarbeiten und b) schriftliche Hausarbeiten zu praxisnahen Themen.

#### 5.2 Course content

##### **Detailed synopsis – Inhalt/Detail:**

Various materials for biomedical applications will be introduced and discussed, for instance, ceramics, glass, metals and polymer-based biomaterials. Their applications, e.g. in dentistry, ophthalmology etc., will be looked at.

Another focus of the course will be on hybrid materials and their applications as bioprobes.

Unterschiedliche Materialsysteme für den biomedizinischen Einsatz werden vorgestellt und diskutiert, z.B. Keramiken, Glas, Metall und polymerbasierenden Biomaterialien. Hier werden unterschiedliche Anwendungsszenarien z.B. aus dem Bereich der Zahnmedizin oder Ophthalmologie betrachtet.

Einen weiteren Schwerpunkt des Kurses bilden hybride Materialien und deren Anwendungsspektrum auch im Bereich vom Einsatz als Biomarkern.

→ details can be found in course syllabus, recommended study plan etc.

**5.3 Short information about module** (This paragraph [max. 250 characters] will be published on the website of FH Münster to support persons interested in studying at FH Münster to choose the appropriate study programme. Please focus on the main intended learning outcomes and course content, ideally also comprising information about the relevance of the module for the further course of study and the labour market. Please formulate whole sentences, address your (prospective) students directly and avoid technical terms.

You will be able to identify different biomedical materials and transfer this knowledge to the various applications.

**6.1 Prerequisites** (*formal*: examination of module XY has to be passed or similar *content-wise*; *module XY should have been attended, the following knowledge and skills should have been acquired: ....*)

<b>Enrollment to Master Biomedical Engineering or Master Materials Science Engineering</b>

<b>5 5.1 Intended learning outcomes</b> (What should students be able to do after having accomplished the module? Does the module provide the opportunity to acquire soft skills in addition to professional knowledge? For which other modules and prospective tasks in the labour market are the acquired knowledge and skills relevant?)  <b>Subject matter expertise</b> By participating in this module students will apply basic knowledge acquired in previous modules as well as deepen and increase existing basics. By participating in a business plan simulation, students learn how to analyse business figures and transfer them into practical insights and make well-considered decisions. After successfully completing the simulation, students will have learned about business decision parameters from a discrete case study and will have an idea of the connections and interdependencies of individual decisions. The interactive and dynamic learning method of the business game method enables the students to evaluate decisions made and learn from the results achieved.																																												

### Social Skills

By working on the business game in groups only, the students acquire important social skills such as teamwork, communication skills and conflict management skills "en passant": The competitive character of the business game addresses the motivational personality of the students and also trains the individual willingness to act. The social behaviour of the students is challenged and trained by the team work which intensifies during the simulation. After participating in the business game, students can work on business tasks and challenges in a cooperative and responsible manner and present and represent subject related content in a way that is appropriate for the target group.

### Self Competence

After participating in the courses of the module, students can classify their role as part of a management team and evaluate their performance contribution. The students recognize the manifold interdisciplinary interfaces in the management of complex institutions and reflect their own influence in the systemic overall context of a networked company.

### Methodical Competence

After participating in the module, students can select and apply different management methods and models according to the situation. The students will analyse concepts of strategic and operative corporate management and derive consequences for various environmental scenarios. Within the framework of a simulated shareholders' meeting the Students present background and consequences of the business decisions they make in the team in a way that is appropriate for the target group.

#### 5.2 Course content

Specific topic of material science

Detailed synopsis

TOPSIM - is a business simulation game that bridges the gap between business theory and business practice. The business simulation represents a realistic, model-like representation of an industrial company. It is an interactive teaching and learning method.

This module can be described as an integrative module, since it takes up various elements of existing modules, e.g. general business administration (marketing policy instruments, production procedures, personnel management, definition of goals) and accounting (profit and cost accounting and product calculation). Important are overall entrepreneurial decisions that have to be made in a team.

→ details can be found in course syllabus, recommended study plan etc.

**5.3 Short information about module** (This paragraph [max. 250 characters] will be published on the website of FH Münster to support persons interested in studying at FH Münster to choose the appropriate study programme. Please focus on the main intended learning outcomes and course content, ideally also comprising information about the relevance of the module for the further course of study and the labour market. Please formulate whole sentences, address your (prospective) students directly and avoid technical terms.

In this module, you will gain competence to translate "facts and figures" into practical findings and decisions.

**6.1 Prerequisites** (*formal*: examination of module XY has to be passed or similar *content-wise*; *module XY should have been attended, the following knowledge and skills should have been acquired: ...*)

Leistungspunkte (i.d.R. 30 Std. = 1 LP) Credits				6 LP
7	<b>Learning outcomes - Lernergebnisse / Lernziele:</b>  Students are familiar with concepts and technologies using size-dependent phenomena and concepts of supramolecular chemistry. In most cases, the associated spatial dimensions will be on the nm-scale. They develop knowledge about chemistry-driven control of size-dependent phenomena and applications. Seminars are prepared and held as a collaborative activity.			

8	<p><b>Detailed synopsis – Inhaltsangabe:</b></p> <p>Introduction into chemical nanotechnology: Definition, scientific and industrial fields of nanotechnology, disciplines involved, specific concepts</p> <p>Rheology: concepts, viscoelasticity, rheological models, chemical control.</p> <p>Wetting: Interface, chemistry, polar and non-polar interaction, models, applications.</p> <p>Nanoparticles: preparation, immobilization, application (e.g. catalysts, sensors, electronics). Semiconducting and functional ceramic nanoparticles: surface chemistry, colloid chemistry, doping, applications.</p> <p>Hybrid structures: Polymers and supramolecular entities with organic and inorganic building blocks, structural templates, mesoporous systems as hosts, sol-gel-chemistry with organically modified precursors, immobilization of biological entities.</p> <p>Self assembly: Principles of self assembly (e.g. membranes, colloidal crystals, lyotropic mesophases).</p> <p>Case studies: Supramolecular interaction and related phenomena in biological and technical environment, food, soft matter.</p> <p>Seminar: Case studies of preparation and characterization of nanomaterials, nanostructures and nanodevices will be prepared based on individual assignments. Emphasis will be laid on chemical methods to prepare and control nanostructures. All materials and contributions will be collected in a database available for all members of the class.</p>
9	<p><b>Requirements for participation in the module - Voraussetzungen für die Teilnahme am Modul:</b></p> <p>Topics of Inorganic and Physical Chemistry from a B.Sc.-programme in Chemistry, Chemical Engineering or similar course programmes.</p>
10	<p><b>Requirements for awarding credit points - Voraussetzungen für die Vergabe von Leistungspunkten:</b></p> <p>Seminar contribution and passing the exam.</p>
11	<p><b>Mode of examination - Prüfungsformen und -umfang:</b></p> <p>Homework (over two weeks) after the course with an assignment based on seminar material; criteria to be announced at course start: 70% of grade points.</p> <p>Quality of seminar contribution (criteria to be announced at course start): 30% of grade points</p>
12	<p><b>Requirements for admission to the examination - Voraussetzungen für die Zulassung zur Prüfung:</b></p> <p>Enrollment in the programme, registration for examination (via myFH-Portal)</p>
14	<p>Course leader: Prof. Dr. Bredol</p>
15	<p>Teacher: Prof. Dr. Bredol</p>

7	<b>Learning outcomes:</b> After attending this course students can describe the basic components, methods and functions of chemical sensors. They can explain the electrochemical and spectroscopic techniques used in chemical sensing and can allocate their typical applications. They can apply the most important parameters for the qualitative evaluation of analytical-chemical measurement systems. Students can reproduce the structure and modes of operation of chemically-sensitive materials, realise the impact of materials science on sensor development and are able to assess solutions to specific analytical questions. On the basis of exercises the students will review their learning progress, discuss examples from the literature and compare different methods. By				

	attending the lab course students apply their learned skills regarding design and fabrication of sensor materials, measurement methods and data evaluation.

<b>5 5.1 Intended learning outcomes</b> (What should students be able to do after having accomplished the module? Does the module provide the opportunity to acquire soft skills in addition to professional knowledge? For which other modules and prospective tasks in the labour market are the acquired knowledge and skills relevant?)  After completing the module "Chemical technology of materials" students can classify phenomena that can be traced back to electronic structures of solids. The students are able to reflect on basic principles such as solid state, ceramic, powder and colloid chemistry in relation to technical applications and to analyse them from the chemist's point of view. By participating in a lab course the acquired theoretical knowledge is put into practice and <a href="https://en.pons.com/translate/english-">https://en.pons.com/translate/english-</a>																																							

[german/the](#)students are able to carry out projects and tasks based on current R & D issues of materials independently.

## 5.2 Course content

### **Detailed synopsis – Inhalt/Detail:**

Free electron approach' :

Time-independent Schrödinger-equation for stationary systems, Eigenvalue, Eigenfunction, k-Vector, density of states in metals

'Tight binding approach':

Bloch-functions of one-, two- and three-dimensional systems, density of states, Brillouin-zones, band structure

Semiconductors:

Boltzmann-, Fermi-Dirac-statistics, conductivity, band structures in semiconductors, LED's, solar cells, semiconductor lasers

Interfaces:

Thermodynamic background, vapor pressure of small droplets, mono- and polydispersed systems, methods to prepare monodispersed dispersions, kinetic vs. steric stabilization, Ostwald-ripening, hydrophobic interaction, lyotropic mesophases, rheology (viscosity, measurement, applications)

Ceramic processes:

Green body processing, raw materials, thermal process (Sintering: transport, fluxes, gas phases)

Lab:

Practical tasks / projects within current R&D work on materials of the department, to be concluded with a written report and presentation of the accomplishments

→ details can be found in course syllabus, recommended study plan etc.

**5.3 Short information about module** (This paragraph [max. 250 characters] will be published on the website of FH Münster to support persons interested in studying at FH Münster to choose the appropriate study programme. Please focus on the main intended learning outcomes and course content, ideally also comprising information about the relevance of the module for the further course of study and the labour market. Please formulate whole sentences, address your (prospective) students directly and avoid technical terms.

In this module, you get to know the phenomena based on the electronic structure of solids through the eyes of a chemist.

6 **6.1 Prerequisites** (*formal*: examination of module XY has to be passed or similar *content-wise*; *module XY should have been attended, the following knowledge and skills should have been acquired: ....*)

Topics of Inorganic and Physical Chemistry from a B.Sc.-programme in Chemistry, Chemical Engineer in or similar course programmes

**6.2 Requirements for awarding credit points** (e.g. passing final examination, successful accomplishment of assignments in the course of study, regular active participation)

Praktikumsnachweis durch schriftlichen Bericht und Vortrag, Literaturrecherche und Bestehen der Prüfung

Written report and oral presentation on the laboratory work conducted, literature review and successful exam.

5 5.1 Learning outcomes				
Students should be able to handle the basic concepts and working methods of inorganic and organic chemistry. At appropriate points, cross-references to materials science or biochemistry will be demonstrated.				
5.2 Detailed synopsis				
<u>Inorganic chemistry</u>				
Units of measurement, ideal gas, energy conversion in chemical processes, application of the law of mass action, atomic structure and chemical bonds, periodic table, oxidation and reduction, acids and bases				
<u>Organic chemistry</u>				
Chemistry of carbon, bond types, hybridization, valence bond model of chemical bonding, electronegativity, dipole moment and formal charges of organic molecules, reactivity, nucleophilicity, electrophilicity, functional groups as ordering principle of organic chemistry, mesomerism, tautomerism, aromaticity, electron distribution in organic compounds, introduction to the nomenclature of simple organic molecules, formula notation, presentation of reaction mechanisms: substitution, addition, elimination				
→ for details: see course catalog, course schedule etc.

<b>5 5.1 Intended learning outcomes</b> (What should students be able to do after having accomplished the module? Does the module provide the opportunity to acquire soft skills in addition to professional knowledge? For which other modules and prospective tasks in the labour market are the acquired knowledge and skills relevant?)  <p>This course is an introduction to electromagnetic fields within ceramic dielectric materials.</p> <p>Students will be able to</p> <ul style="list-style-type: none"> <li>• identify different ceramic dielectric materials and transfer their knowledge to the various applications,</li> <li>• write scientific texts using the correct terminology and outline complex subject matter in presentations,</li> <li>• describe ceramic dielectric materials and investigate analytically their properties in a laboratory class.</li> </ul>																																							

Within the laboratory class different dielectric materials are manufactured and analyzed with optical and electrical methods.

Dieses Modul gibt eine Einführung in die Grundlagen der keramischen Dielektrika.

Die Studierenden können

keramische dielektrische Materialien dem Kontext entsprechend einordnen und auf unterschiedliche Anwendungsbereiche transferieren,

wissenschaftliche Texte schreiben und in Präsentationen komplexe Sachverhalte darstellen,

im Praktikum den Umgang mit verschiedenen keramischen Dielektrika erproben und deren Eigenschaften untersuchen.

In einem Praktikum werden diese Materialien zum Teil hergestellt und dann mit elektrischen und optischen Methoden untersucht.

#### 5.2 Course content

At the beginning of the course the theory of electromagnetic fields within dielectric material is introduced. Then, this knowledge is applied to different interesting dielectrics and ceramics, for instance, piezoelectric ceramics as actuators, dielectric waveguides and photonic structures, high-temperature superconductors etc.

Es werden die theoretischen Eigenschaften des elektrischen Feldes innerhalb von Dielektrika beschrieben. Einzelne interessante Dielektrika und Keramiken werden vorgestellt und diskutiert, wie, z.B. Piezoelektrische Keramiken als Aktuatoren, dielektrische Wellenleiter und photonische Strukturen, Keramische Hochtemperatursupraleiter etc.

→ details can be found in course syllabus, recommended study plan etc.

**5.3 Short information about module** (This paragraph [max. 250 characters] will be published on the website of FH Münster to support persons interested in studying at FH Münster to choose the appropriate study programme. Please focus on the main intended learning outcomes and course content, ideally also comprising information about the relevance of the module for the further course of study and the labour market. Please formulate whole sentences, address your (prospective) students directly and avoid technical terms.

This course introduces you into the physics of electromagnetic fields within dielectric materials and enables you to identify and transfer these skills to various applications.

**6 6.1 Prerequisites** (*formal*: examination of module XY has to be passed or similar content-wise; *module XY should have been attended, the following knowledge and skills should have been acquired*: ....)

<b>5 5.1 Intended learning outcomes</b> (What should students be able to do after having accomplished the module? Does the module provide the opportunity to acquire soft skills in addition to professional knowledge? For which other modules and prospective tasks in the labour market are the acquired knowledge and skills relevant?)  <p>Die Studierenden erlangen Grundlagenwissen in der universell einsetzbaren Finite Elemente Methode (FEM). Zusammen mit ihrem Wissen über Mikroaktuatoren und mikrooptische Komponenten können sie FEM -Berechnungen zu verschiedenen Mikroaktuatoren durchführen. Dadurch sind die Studierenden in der Lage die verschiedenen Aktuatorprinzipien hinsichtlich ihrer Eignung für MOEMS (micro-opto-electro-mechanical systems) zu vergleichen. Das Modul ist ein spezielles Thema der Materialwissenschaften / Specific topic of materials science</p> <p>Das Modul wird in deutscher Sprache unterrichtet. Vorlesungsstoff und Lernmaterial stehen in englischer Sprache zur Verfügung. The module will be taught in German. Lecture material and learning materials are available in English.</p>																																										

	<p><b>5.2 Course content</b></p> <p>Einführung in die FEM (Finite Elemente Methode)</p> <ul style="list-style-type: none"> <li>– Grundlegende Struktur der statischen mechanischen Fragestellungen mit der FEM (Finite Elemente Methode)</li> <li>– Transiente und Frequenzganganalysen</li> <li>– Nichtlineare Berechnungen</li> <li>– Übertragung des Verfahrens auf thermische, elektrische und magnetische Aufgabenstellungen</li> <li>– Gekoppelte Berechnungen</li> <li>– MOEMS (micro-opto-electro-mechanical systems) als Beispiele für gekoppelte Analysen</li> <li>– Bearbeitung einer konkreten Fragestellung zu nicht-linearen Materialmodellen</li> </ul> <p>→ details can be found in course syllabus, recommended study plan etc.</p>
5	<p><b>5.3 Short information about module</b> (This paragraph [max. 250 characters] will be published on the website of FH Münster to support persons interested in studying at FH Münster to choose the appropriate study programme. <b>5 5.1 Intended learning outcomes</b> (What should students be able to do after having accomplished the module? Does the module provide the opportunity to acquire soft skills in addition to professional knowledge? For which other modules and prospective tasks in the labour market are the acquired knowledge and skills relevant?)  Die Studierenden lernen die grundlegenden Verfahren der Halbleitertechnologie kennen und können dadurch Prozessabläufe zur Herstellung der Bauteile entwickeln. Hinzukommt, dass die Studierenden ihr sprachliches Verständnis durch das eigenständige Erschließen fremdsprachiger Veröffentlichungen vertiefen. In Kurzvorträgen können die Studierenden die erarbeiteten Informationen präsentieren.																																													

## 5.2 Course content

Das Modul ist ein spezielles Thema der Materialwissenschaften / Specific Topic of materials science

Das Modul wird in deutscher Sprache unterrichtet. Vorlesungsstoff und Lernmaterial stehen in englischer Sprache zur Verfügung. The module will be taught in German. Lecture material and learning materials are available in English.

### **Inhalt/Detail - Detailed synopsis:**

Einführung in die Dünnschichttechnik

- Siliziumherstellung und –bearbeitung
- Schichtherstellung (Sputtern, LPCVD-Verfahren)
- Schichtstrukturierung (UV-Lithographie, Ätzprozesse)
- Galvanotechnik, Bulkmechanik, Grautonlithographie
- Physikalische Basis von Mikroaktoren und mikrooptischen

Komponenten

- Elektrostatistische, elektromagnetische Aktoren
- Piezoelektrischer Effekt, thermomechanische

Aktoren

- Beispiele für MOEMS (micro-opto-electro-mechanical systems)
- adaptive Spiegel, Digital Mirror Devices, Blase Gitter,

Mikrolinsen, thermooptische Schalter

→ details can be found in course syllabus, recommended study plan etc.

**5.3 Short information about module** (This paragraph [max. 250 characters] will be published on the website of FH Münster to support persons interested in studying at FH Münster to choose the appropriate study programme. Please focus on the main intended learning outcomes and course content, ideally also comprising information about the relevance of the module for the further course of study and the labour market. Please formulate whole sentences, address your (prospective) students directly and avoid technical terms.

### **Students get to know the FEM and how to use it properly**

**6.1 Prerequisites** (*formal*: examination of module XY has to be passed or similar *content-wise*; *module XY should have been attended, the following knowledge and skills should have been acquired: ...*)

Bachelorabschluss in Chemie /Chemieingenieurwesen, Physik / Physikalischer Technik oder ähnlicher Fachrichtungen.

Bachelor's degree in chemistry, physics or closely related

**6.2 Requirements for awarding credit points** (e.g. passing final examination, successful accomplishment of assignments in the course of study, regular active participation)

Erfolgreicher Abschluss der Übung und Bestehen der Prüfung.

Passing exercises and passing the examination

**6.3 Type and extent of examination** (e.g. written exam, oral exam, term paper, presentation, portfolio, duration of examination in minutes)

Klausur oder mündliche Prüfung,

Oral / written examination

**6.4 Requirements for admission to examination**

Einschreibung im Studiengang, fristgerechte Anmeldung zur Prüfung und erfolgreiches Absolvieren des Praktikums

Enrollment in the program, register for the examination and passing practical

Anerkennung der im Rahmen der Übung zusätzlich ausgearbeiteten Präsentation

	<p><b>6.5 Weighing of module grade when calculating final grade</b></p> <p>see examination regulations for aforementioned study programmes (line 3).*</p> <p><small>*You will find the examination regulations of all study programmes in the official announcements of the FH Münster: <a href="https://www.fh-muenster.de/hochschule/aktuelles/amtliche_bekanntmachungen/index.php?p=2,7">https://www.fh-muenster.de/hochschule/aktuelles/amtliche_bekanntmachungen/index.php?p=2,7</a>.</small></p>

5	<p><b>5.1 Intended learning outcomes</b> (What should students be able to do after having accomplished the module? Does the module provide the opportunity to acquire soft skills in addition to professional knowledge? For which other modules and prospective tasks in the labour market are the acquired knowledge and skills relevant?)</p> <p>Participants will learn and understand the requirements for placing Hazardous Substances on the European Union market. They will understand the classification and labelling of substances according to their physical-chemical, toxicological and ecotoxicological properties. Students will learn how to perform and interpret tests for persistency, biodegradation and ecotoxicity.</p> <p><b>5.2 Course content</b></p> <ul style="list-style-type: none"> <li>- Registration, Evaluation and Authorization of Chemicals (1907/2006/EU)</li> <li>- classification, labelling and packaging of substances and mixtures (1272/2008/EU)</li> <li>-basics in toxicology and ecotoxicology</li> <li>- regulations concerning worker protection with respect to hazardous substances</li> <li>- regulations concerning marketing of hazardous substances</li> <li>-exposure assessment (principles of monitoring; IT tools , p.e. Advanced REACh Tool (ART), ECETOC TRA or Chesar)</li> <li>- properties of selected hazardous substances</li> </ul> <p>Lab (for 6 CP):</p> <p>During the semester practical experiments are performed concerning ecotoxicity. Each student has to write experimental reports and is to give an oral presentation of the experiments performed.</p> <p>Optional add-on, in German language only: bei erfolgreicher Teilnahme am Modul „Hazardous Substances“ können Teilnehmer – unabhängig von ihrer Nationalität – eine schriftliche Prüfung zur eingeschränkten Sachkunde nach §11 der Chemikalienverbotsverordnung ablegen. Die Prüfungsbedingungen orientieren sich an der jeweils gültigen Fassung der „Bekanntmachung zum Sachkundenachweis gemäß Chemikalienverbotsverordnung“ des Bundesministeriums für Umwelt, Naturschutz und Reaktorsicherheit<sup>1</sup>. Die Fragen werden der 30 Tage vor Klausurtermin aktuellsten Fassung des Fragenkataloges, Teil I und II „Gemeinsamer Fragenkatalog der Länder (GFK) für die Sachkundeprüfung nach §11 Chemikalienverbotsverordnung“ entnommen. Von den jeweils 20 Fragen müssen innerhalb 60 Minuten jeweils mindestens 11 Fragen richtig beantwortet werden. Das Bestehen dieser Zusatzprüfung hat weder eine Wirkung auf die Vergabe oder Anzahl der Leistungspunkte noch auf die Gesamtnote des Moduls, führt aber zum Erwerb der eingeschränkten Sachkunde nach ChemikalienverbotsVO. Diese Zusatzprüfung kann nur in Deutsch abgelegt werden.</p> <p>→ details can be found in course syllabus, recommended study plan etc.</p>

Sie werden in die Lage versetzt, innovative Werkstoffe bezüglich der auftretenden Beanspruchungen zu evaluieren und die sich daraus ergebenden Gesamtsysteme auch hinsichtlich der Life-Cycle-Costing und Energieeffizienz Aspekte zu beurteilen. Die Studierenden werden die Gesamtzusammenhänge in tribologische Fragestellungen hinsichtlich Tribosysteme, Schadensbilder und Werkstoffbeschichtungen erkennen können. Des Weiteren sollen die Grundlagen im Leichtbau hinsichtlich Konstruktionsprinzipien, Berechnungen und Werkstoffauswahl vermittelt werden. Ein Schwerpunkt im Bereich Leichtbau wird in der Faserverbundtechnik liegen.</p>																																															

Ferner werden die Studierenden befähigt, Ergebnisse aus Werkstoffversuchen zu strukturieren / zu interpretieren und die Einführung / Anwendung innovativer Werkstoffe mit entsprechendem Engagement voranzutreiben.

Students acquire expertise in the application and evaluation of innovative materials with a focus on lightweight construction applications as well as tribology applications. They will be enabled to evaluate innovative materials with regard to the stresses that occur and to assess the resulting overall systems with regard to life cycle costing and energy efficiency aspects. The students will be able to recognize the overall connections in tribological questions regarding tribological systems, damage patterns and mechanical coatings. Furthermore, the fundamentals of lightweight construction with regard to design principles, calculations and material selection will be thought. One focus in the field of lightweight construction will be on fibre composite technology. Also students will be enabled to structure and interpret results of material tests and to push forward the introduction/application of innovative materials.

## 5.2 Course content

### **Inhalt/Detail - Detailed synopsis:**

Es sollen die Gesamtzusammenhänge in tribologische Fragestellungen hinsichtlich Tribosysteme, Schadensbilder und Werkstoffbeschichtungen vermittelt werden. Des Weiteren sollen die Grundlagen im Leichtbau hinsichtlich Konstruktionsprinzipien, Berechnungen und Werkstoffauswahl dargelegt werden. Ein Schwerpunkt im Bereich Leichtbau wird in der Faserverbundtechnik liegen

The overall context of tribological questions regarding tribological systems, damage patterns and material coatings is to be conveyed. Furthermore, the fundamentals of lightweight construction with regard to design principles, calculations and material selection will be presented. A focus in the field of lightweight construction will be on fibre composite technology

→ details can be found in course syllabus, recommended study plan etc.

**5.3 Short information about module** (This paragraph [max. 250 characters] will be published on the website of FH Münster to support persons interested in studying at FH Münster to choose the appropriate study programme. Please focus on the main intended learning outcomes and course content, ideally also comprising information about the relevance of the module for the further course of study and the labour market. Please formulate whole sentences, address your (prospective) students directly and avoid technical terms.

In this lecture students get to know, how to evaluate innovative materials based on different conditions and get the knowledge of the basics in construction, calculation and the best material selection.

### **6.1 Prerequisites** (*formal*: examination of module XY has to be passed or similar *content-wise*: module XY should have been attended, the following knowledge and skills should have been acquired: ....)

Bachelorabschluss in Chemie /Chemieingenieurwesen, Physik / Physikalischer Technik, Maschinenbau oder ähnlicher Fachrichtungen.  
Bachelor's degree in chemistry, physics, mechanical engineering or related

### **6.2 Requirements for awarding credit points** (e.g. passing final examination, successful accomplishment of assignments in the course of study, regular active participation)

Erfolgreicher Abschluss der Übungen, Praktika, sowie Hausarbeit und Bestehen der Prüfung.  
Successful passing of exercises, practice and passing the examination

<p><b>6.3 Type and extent of examination</b> (e.g. written exam, oral exam, term paper, presentation, portfolio, duration of examination in minutes)</p> <p>Klausur oder mündliche Prüfung Oral / written examination</p>

<b>5 Die Studierenden sollen mit den theoretischen und praktischen Erkenntnissen dieser Vorlesung in der Lage sein, neue Verfahren der Lasermaterialbearbeitung zu entwickeln, optimieren und qualifizieren. Sie sollen auch den theoretischen Hintergrund der Strahl-/Materie-Wechselwirkung tiefer gehend verstehen und beschreiben können, um über eine fundierte Basis zur wissenschaftlichen Arbeit (bspw. Promotion) zu verfügen. Durch die Versuche im Praktikum können die Studierenden wissenschaftliche Problemstellungen lösen.</b>				

## 5.2 Course content

### Detailed synopsis – Inhalt/Detail:

Einleitend werden die in der Lasermaterialbearbeitung verwendeten Strahlquellen (Nd:YAG, Excimer, CO<sub>2</sub>, Hochleistungs-Dioden-Laser) mit ihren charakteristischen Eigenschaften für diese Anwendung präsentiert. In den Vorlesungsstoff werden auch ständig Neuentwicklungen mit Zukunftspotential integriert, wie bspw. derzeitige Scheiben- und Faserlaser. Für die Materialbearbeitung relevante Strahlparameter (Strahlqualität, Moden, Leistung, Pulsdauer und -frequenz, Polarisation) werden vorgestellt; ebenfalls dazugehörige Messverfahren. Daran angeschlossen werden die Strahlführung (inkl. LWL) und -formung. Die Strahlformung bei Hochleistungs-Diodenstacks mit Hinblick auf kleinstmögliche Bündelung wird besonders behandelt. Die Wechselwirkung von Strahlung mit Materie wird phänomenologisch und anschließend auch atomistisch betrachtet. Anlagenkonzepte für die industrielle Praxis werden vorgestellt. Die Bearbeitungsverfahren Schneiden, Bohren, Beschriften, Schweißen und Härten werden detailliert behandelt. Die Lasermikrobearbeitung ist ein eigenständiges Kapitel. In einer Vorlesungseinheit sollen aus aktuellen F&E-Arbeiten des Laserlabors Ergebnisse präsentiert werden. Im begleitenden Praktikum werden alle o.g. Bearbeitungsverfahren an Hochleistungs-Laseranlagen mit industriellem Standard durchgeführt. Der Bearbeitungsprozess an den Anlagen wird unter wissenschaftlichen Gesichtspunkten bspw. auch mittels LIP-Spektroskopie, Online-Monitoring analysiert. Für die Qualitätsbeurteilung werden auch REM und EDX eingesetzt

→ details can be found in course syllabus, recommended study plan etc.

**5.3 Short information about module** (This paragraph [max. 250 characters] will be published on the website of FH Münster to support persons interested in studying at FH Münster to choose the appropriate study programme. Please focus on the main intended learning outcomes and course content, ideally also comprising information about the relevance of the module for the further course of study and the labour market. Please formulate whole sentences, address your (prospective) students directly and avoid technical terms.

Sie lernen, neue Verfahren der Lasermaterialbearbeitung zu entwickeln, optimieren und qualifizieren. Ferner ist der tiefer gehende theoretische Hintergrund der Strahl-/Materie-Wechselwirkung Bestandteil dieses Moduls.

**6.1 Prerequisites** (*formal*: examination of module XY has to be passed or similar *content-wise*; *module XY should have been attended, the following knowledge and skills should have been acquired*: ....)

Inhaltlich baut die Vorlesung auf Werkstofftechnik, Grundlagen der Lasertechnik, Laserphysik, Technische Optik I/II auf. Für die Durchführung des Praktikums ist die Teilnahme an der Lasersicherheitseinweisung erforderlich.

**6.2 Requirements for awarding credit points** (e.g. passing final examination, successful accomplishment of assignments in the course of study, regular active participation)

Bestehen der Prüfung

**6.3 Type and extent of examination** (e.g. written exam, oral exam, term paper, presentation, portfolio, duration of examination in minutes)

Klausur oder mündliche Prüfung

Anerkennung des Praktikums (d.h. erfolgreiches Kolloquium / Antestat in kleinen Gruppen vor Beginn jedes Versuchs, Durchführung der Versuche incl. konkreter Aufgabenstellungen, erfolgreiches Abtestat)

**6.5 Weighing of module grade when calculating final grade**

\*You will find the examination regulations of all study programmes in the official announcements of the FH Münster: [https://www.fh-muenster.de/hochschule/aktuelles/amtliche\\_bekanntmachungen/index.php?p=2,7](https://www.fh-muenster.de/hochschule/aktuelles/amtliche_bekanntmachungen/index.php?p=2,7).

<b>5</b> Students should be able to handle the basics of laser technology and apply these on the following lectures: Laser-development, Laser metrology, Optical communication, Laser material processing. This should also be used to be able to carry out scientific work (doctoral thesis) in the field of laser physics.																																									

<p>Starting from necessary basics of the laser principle (amplification, resonator, excitation) the laser process is treated with the rate equations. Stationary and dynamic cases for solutions of the equations are investigated. The Gaussian beam theory for beam propagation inside and outside the resonator is explained. The formation of longitudinal and transverse modes is presented, measures for influencing them and practical consequences are presented. Causes of line propagation and possibilities to reduce them (e.g. 2-mode control loop) are presented. Basics of frequency multiplication in nonlinear crystals and other nonlinear optical effects (e.g. OPO, saturable absorption) are presented. The generation of short pulses (Q-switch, mode coupling) is also part of the course content. Special laser systems for practical use are explained in detail. One focus is on modern excitation with laser diodes. Future laser concepts, such as X-ray lasers and free-electron lasers, are also discussed. In the practical course the theoretical knowledge of the lecture is deepened on modern experimental laser systems. Completely functional lasers (&lt; 1W) are built up from modules and measurements of the beam properties are performed. Nonlinear laser processes (frequency doubling, saturable absorber) are also experimentally investigated in the practical course.</p>
<p><b>5.3 Short information about module</b> (This paragraph [max. 250 characters] will be published on the website of FH Münster to support persons interested in studying at FH Münster to choose the appropriate study programme. <b>5 5.1 Intended learning outcomes</b> (What should students be able to do after having accomplished the module? Does the module provide the opportunity to acquire soft skills in addition to professional knowledge? For which other modules and prospective tasks in the labour market are the acquired knowledge and skills relevant?)  <p>After having attended the module, students can explain the structure and list the components of Life Cycle Assessment and factors influencing the Life Cycle Assessment: material, energy and emission balance for a desired service output like, e.g., "transporting people over a distance of 20 km" or "water tight roofing of a building for a service life of 50 years". The students can describe midpoint-indicators in general and selected ones in detail. Students can summarize basic business and marketing strategies. By working in teams on a key study, students acquire the ability to argument objectively and achieve mutual agreements in a working group.</p>																																											

<p>5.2 Course content</p> <p><b><u>Detailed synopsis – Inhalt/Detail:</u></b></p> <p>Detailed synopsis:</p> <ul style="list-style-type: none"> <li>- three pillars of sustainability and background of sustainability;</li> <li>- Life Cycle Assessment: ISO 14040 and ISO 14044; functional unit (fU: the desired service output of a product); system boundaries (time, geographic); midpoint indicators ozone creation, ozone depletion, acidification, eutrophication, land use, toxicity and ecotoxicity in general; midpoint indicators resource depletion and energy balance as well as climate change in detail;</li> <li>- Product Category Rules(PCR: service-specification of a product, p. e. what visible light transmittance, infrared absorbance and mechanical stability and lifetime is defined for a window) ;</li> <li>- Environmental Product Declaration (EPD: what is the resource and energy consumption of a product that fulfils the PCR, what emissions are linked to its production with reference of the functional unit)</li> </ul> <p>Exercise: working groups will be formed and every group will be get a key study in the area of LCA. A presentation has to be given to the course, and a report has to be issued.</p> <p>→ details can be found in course syllabus, recommended study plan etc.</p>	
<p><b>5.3 Short information about module</b> (This paragraph [max. 250 characters] will be published on the website of FH Münster to support persons interested in studying at FH Münster to choose the appropriate study programme. 7	<b>Learning outcomes:</b>  Students can evaluate the most important properties and key parameters of polymers, classify different types of macromolecules and point out their applications. They can explain the basic relations between molecular structure and mechanical as well as optical properties of polymer materials. They understand the relevant models describing the rheological behavior of plastics and the characteristics of polymers in solution and in melt. They can characterize different types of polymerization reactions and analytical methods to determine the molecular mass of macromolecules. The students apply the concepts of compounding and				

	processing and operate typical machines for polymer processing such as extrusion or injection moulding by attending the practical lab course. The students will review their learning progress and discuss current issues of production, dispersion and recycling of plastics in the accompanying exercises.
8	<b><u>Detailed synopsis:</u></b> <ol style="list-style-type: none"> <li>1) Polymer technology and industry, economic and ecologic aspects of current polymer production</li> <li>2) Terms and definitions in macromolecular chemistry and polymer science</li> <li>3) Chemical structures of most relevant polymer classes and their applications</li> <li>4) Isomerism and macromolecular structures</li> <li>5) Mechanical properties of amorphous and semi-crystalline thermoplasts, and of polymer melts.</li> <li>6) Properties of elastomers</li> <li>7) Polymers in solution and methods for molecular mass determination</li> <li>8) Basics of polymer processing including recycling</li> <li>9) Functional polymers and polymers for optoelectronic applications</li> <li>10) Overlook on polymerization reactions (radical, ionic, polycondensation, catalytic)</li> <li>11) Lab course (extrusion, melt flow index, DSC, impact test, viscosimeter, polymerization reaction)</li> </ol>

<b>5 5.1 Intended learning outcomes</b> (What should students be able to do after having accomplished the module? Does the module provide the opportunity to acquire soft skills in addition to professional knowledge? For which other modules and prospective tasks in the labour market are the acquired knowledge and skills relevant?)  <p>After participating in the module "Membrane Separations" students can differentiate between equilibrium and non-equilibrium separation processes, as they gain an understanding of the analysis and determination of separation processes. The physical conditions are illustrated by actively carried out lab courses which are good practice for the handling of necessary tools. Participants can choose the appropriate tools to obtain quantitative solutions to membrane separations problems. They are able to design various types of membrane separation processes. Thus the students are able to face the practical challenges of designing different types of membrane separation processes.</p>																																															

## 5.2 Course content

Introduction to membrane technology:

Rejection, selectivity, flux, driving forces, membranes and their characterization

Mass transfer:

Mass transfer in porous and non-porous membranes, concentration polarization, fouling and scaling, gel-permeation model, osmotic pressure model

Pressure driven membrane separations for liquid mixtures with liquid products:

Microfiltration, Ultrafiltration, Nanofiltration, Reverse Osmosis

Permeation of gases and vapours:

Gas permeation, vapour permeation, pervaporation

Membrane separations driven by concentration difference:

Dialysis, membrane contactors

Membrane separations driven by an electrical field

Lab: Experimental tasks with respect to membrane characterization and membrane production

→ details can be found in course syllabus, recommended study plan etc.

**5.3 Short information about module** (This paragraph [max. 250 characters] will be published on the website of FH Münster to support persons interested in studying at FH Münster to choose the appropriate study programme. Please focus on the main intended learning outcomes and course content, ideally also comprising information about the relevance of the module for the further course of study and the labour market. Please formulate whole sentences, address your (prospective) students directly and avoid technical terms.

You will obtain a profound knowledge about the mass transfer in membrane separation with emphasis on a deep physical understanding of these processes. You will be able to design various types of membrane separation processes.

**6.1 Prerequisites** (*formal*: examination of module XY has to be passed or similar *content-wise*; *module XY should have been attended, the following knowledge and skills should have been acquired: ...*)

Bachelor degree in Chemical Engineering, Chemistry or closely related

**6.2 Requirements for awarding credit points** (e.g. passing final examination, successful accomplishment of assignments in the course of study, regular active participation)

Accepted lab report and pass the exam.

**6.3 Type and extent of examination** (e.g. written exam, oral exam, term paper, presentation, portfolio, duration of examination in minutes)

Written (120 minutes) or oral exam.

**6.4 Requirements for admission to examination**

Enrollment in the programme, register for the examination (via LSF)

**6.5 Weighing of module grade when calculating final grade**

see examination regulations for aforementioned study programmes (line 3).\*

\*You will find the examination regulations of all study programmes in the official announcements of the FH Münster: [https://www.fh-muenster.de/hochschule/aktuelles/amtliche\\_bekanntmachungen/index.php?p=2,7](https://www.fh-muenster.de/hochschule/aktuelles/amtliche_bekanntmachungen/index.php?p=2,7).

<b>5 5.1 Intended learning outcomes</b> (What should students be able to do after having accomplished the module? Does the module provide the opportunity to acquire soft skills in addition to professional knowledge? For which other modules and prospective tasks in the labour market are the acquired knowledge and skills relevant?)  After completion of the module, the students can differentiate and explain the different characteristics modern methods of structure elucidation of solid state materials. They are able to plan and perform structure elucidation of solid state materials themselves. The students can summarize the basics of symmetry and the most important aspects of the electromagnetic spectrum in respect to structure. The students can perform x-ray and neutron diffraction measurements of powder and single crystal samples.																																									

<p><b>5.2 Course content</b></p> <p><b>Details:</b></p> <ol style="list-style-type: none"> <li>1. Theory (literature, the electromagnetic spectrum and its application in regard to structure elucidation, crystal diffraction, symmetry and space groups)</li> <li>2. Diffraction (powder diffraction) and structure elucidation, the various diffractometers, detectors, monochromators, sample preparation, requirements and potential mistakes, evaluation of the measurement data, profile fitting and profile functions, goodness-of-fit and R-values, structure refinement of powder samples: Rietveld analysis, examples and application</li> <li>3. Diffraction methods: x-ray (single crystal), neutrons and synchrotron, single crystal structure elucidation, neutron diffraction, synchrotron</li> <li>4. Additional methods of structure elucidation: AFM (atomic force microscopy) and STM (scanning tunnel microscopy)</li> </ol> <p><b>Exercises</b></p> <p>Exercises deepen the understanding of the subject matter. The exercise is done together with the lecturer and allows the students work through the exercises with the lecturer. Furthermore, samples will be measured using an x-ray spectrometer. The measurements will be evaluated and a Rietveld refinement will be done. → details can be found in course syllabus, recommended study plan etc.</p>	<p><b>5.3 Short information about module</b> (This paragraph [max. 250 characters] will be published on the website of FH Münster to support persons interested in studying at FH Münster to choose the appropriate study programme. <b>5 5.1 Intended learning outcomes</b> (What should students be able to do after having accomplished the module? Does the module provide the opportunity to acquire soft skills in addition to professional knowledge? For which other modules and prospective tasks in the labour market are the acquired knowledge and skills relevant?)  After participating in the module "Optical and electrical characterization of materials", students are able to characterize materials based on their optical and electrical properties. Practical exercises increase the competence of surface characterization of materials. Moreover, students will be able to perform basic calculations necessary for the characterization of these materials.																																							

	<p><b>5.2 Course content</b></p> <p>Absorptions- und luminescence spectroscopy on single crystalline, ceramic and powder materials Determination of absorption- and extinction coefficients, measurement of absorption, reflection, excitation and emission spectra. Time resolved spectroscopy, temperature dependent spectroscopy, VUV spectroscopy, Kubelka-Munk function, instrumental aspects, evaluation under calorimetric point of views, quantum efficiency determination, flicher measurements, saturation, actinometry.</p> <p>Electric and dielectric properties Two and four point method, excess conductivity on surfaces, application in types of electrodes and charge carrier species, alternating current conductivity, impedance spectroscopy, definition of the relative dielectric constant and refractive index, polarization and mechanisms of polarization, relaxation times and frequency dependencies, electric susceptibility → details can be found in course syllabus, recommended study plan etc.</p>
	<p><b>5.3 Short information about module</b> (This paragraph [max. 250 characters] will be published on the website of FH Münster to support persons interested in studying at FH Münster to choose the appropriate study programme. Please focus on the main intended learning outcomes and course content, ideally also comprising information about the relevance of the module for the further course of study and the labour market. Please formulate whole sentences, address your (prospective) students directly and avoid technical terms.</p> <p>You learn to characterize inorganic materials regarding their optical and electrical properties. Moreover, they will be able to perform basic physical surface characterizations of these materials.</p>

5 5.1 Intended learning outcomes (What should students be able to do after having accomplished the module? Does the module provide the opportunity to acquire soft skills in addition to professional knowledge? For which other modules and prospective tasks in the labour market are the acquired knowledge and skills relevant?)							
<p>Die Studierenden kennen die wichtigsten Eigenschaften von Solarzellen und Solarmodulen, können diese vermessen und die Ergebnisse bewerten.</p> <p>Sie sind in der Lage, Photovoltaische Systeme individuell zu planen und deren Ertrag und Wirtschaftlichkeit zu beurteilen.</p> <p>Diese Fachkompetenz wurde durch die Behandlung und Diskussion der technischen Hintergründe in der Vorlesung, durch die Bearbeitung von Aufgaben in der Übung und durch die Absolvierung des Praktikums mit konkreten Mess- und Simulationsaufgaben erlangt.</p>							

**Entwickelte Sozialkompetenz:**

Die Studierenden haben Team- und Kommunikationskompetenz durch Kooperation im vorlesungsbegleitenden Praktikum erlangt.

**Entwickelte Selbstkompetenz:**

Die Studierenden haben ihre Reflexionsfähigkeit erhöht, indem sie Fragestellungen der globalen Klimakrise diskutiert und in Bezug zu ihrem persönlichen Lebensstil gestellt haben.

5.2 Course content

**Detailed synopsis – Inhalt/Detail:**

- Einleitung und Übersicht
- Strahlungsangebot der Sonne
- Grundlagen der Halbleiterphysik
- Solarzellen
- Zellenherstellung und Zellentechnologien
- Solarmodule und Solargeneratoren
- Systemtechnik netgekoppelter Anlagen
- Speicherung von Solarstrom
- Photovoltaische Messtechnik
- Planung und Betrieb
- Zukünftige Entwicklung

→ details can be found in course syllabus, recommended study plan etc.

5 **5.3 Short information about module** (This paragraph [max. 250 characters] will be published on the website of FH Münster to support persons interested in studying at FH Münster to choose the appropriate study programme. Please focus on the main intended learning outcomes and course content, ideally also comprising information about the relevance of the module for the further course of study and the labour market. Please formulate whole sentences, address your (prospective) students directly and avoid technical terms.

The aim of this module is to measure photovoltaic systems with suitable devices and to optimize the interconnection of solar generators. In addition, you get to know common simulation programs and how to dimension photovoltaic systems.

6 **6.1 Prerequisites** (*formal*: examination of module XY has to be passed or similar *content-wise*; *module XY should have been attended, the following knowledge and skills should have been acquired: ....*)

Es wird elektrotechnisches und physikalisches Grundwissen vorausgesetzt.  
Basic knowledge in electrics and physics

**6.2 Requirements for awarding credit points** (e.g. passing final examination, successful accomplishment of assignments in the course of study, regular active participation)

- Anerkennung der Ausarbeitung zum Praktikum
- Erfolgreicher Abschluss des Fachreferats
- Bestehen der Prüfung

Passing the lab course  
Passing the seminar  
Passing the exam

5.1 Intended learning outcomes (What should students be able to do after having accomplished the module? Does the module provide the opportunity to acquire soft skills in addition to professional knowledge? For which other modules and prospective tasks in the labour market are the acquired knowledge and skills relevant?)							
<p>Students are able to plan small and medium projects independently. They can apply the scientific, economic and electronic tools of project management. The students deepen and verify their obtained knowledge in a simulated IT-project and by means of the TOPSIM simulation game STARTUP 4. Based on economic knowledge of project management, the students work out examples which strategies can be applied to structure a project. In project studies the students structure their own projects and later present the results. This makes it easy for participants to enter industrial practice.</p>							

## 5.2 Course content

### Seminar part 1

Business Administration: legal contracts, procurement, production, marketing, organization, investment profitability, financing, constitutive decisions, profit & loss schemes

### Seminar part 2

Project Management: project initialization, project organization, project team, project structure, Gantt and network planning techniques, resource and cost planning, monitoring and reporting, project change management

### Project on bcs training

Initializing an IT-project, preparing a quotation, realization of the project considering most of the topics mentioned before under Business Administration and Project Management

### Simulation game

#### TopSim Start-up 4

→ details can be found in course syllabus, recommended study plan etc.

**5.3 Short information about module** (This paragraph [max. 250 characters] will be published on the website of FH Münster to support persons interested in studying at FH Münster to choose the appropriate study programme. Please focus on the main intended learning outcomes and course content, ideally also comprising information about the relevance of the module for the further course of study and the labour market. Please formulate whole sentences, address your (prospective) students directly and avoid technical terms.

Structuring projects is the basis for carrying out medium and large projects in the industry independently. For this purpose, you structure in participant project studies, self-selected projects by using electronic tools.

**6.1 Prerequisites** (*formal*: examination of module XY has to be passed or similar content-wise; *module XY should have been attended, the following knowledge and skills should have been acquired: ...*)

Bachelor degree in Physics, Engineering Physics, Applied Chemistry, Chemical Engineering, Chemistry, or closely related

**6.2 Requirements for awarding credit points** (e.g. passing final examination, successful accomplishment of assignments in the course of study, regular active participation)

### Participation in the

- Project on bcs training
- Simulation game TopSim Start-up 4

Passing the exam.

**6.3 Type and extent of examination** (e.g. written exam, oral exam, term paper, presentation, portfolio, duration of examination in minutes)

Written (2 hrs) or oral (30 - 45 min) at the end of the semester.

<b>6.4 Requirements for admission to examination</b>
Enrollment in the programme, register for the examination (via LSF)
<b>6.5 Weighing of module grade when calculating final grade</b>

<b>5 5.1 Intended learning outcomes</b> (What should students be able to do after having accomplished the module? Does the module provide the opportunity to acquire soft skills in addition to professional knowledge? For which other modules and prospective tasks in the labour market are the acquired knowledge and skills relevant?)  This course is an introduction to quantum sensors and their applications. Students will be able to <ul style="list-style-type: none"> <li>gain a basic understanding of quantum systems and the electronic detection of the sensor signal,</li> <li>read and discuss scientific papers for the applications of quantum sensors,</li> <li>write scientific summary texts using the correct terminology and outline complex subject matter in presentations.</li> </ul>																																														

Dieses Modul gibt eine Einführung in Quantensensoren und deren Anwendungsbereiche.

Die Studierenden können

- die grundlegende Funktionsweise von Quanten-Systemen und die hiermit verbundenen Signaldetektionsstrategien einordnen,
- wissenschaftliche Veröffentlichungen im Bereich der Quantensorik lesen und diskutieren,
- wissenschaftliche Überblicksartikel und Präsentationen erstellen

#### 5.2 Course content

Quantum sensors are an emerging class of sensor that promise substantial advantages over existing sensor concepts. Here, a single quantum system acts as the sensing element of the sensor. Possible sensors are highly sensitive magnetic or gravitational field sensors, that lead to applications in current sensing, chemical nuclear magnetic resonance probes, or deep brain imaging, etc. In order to detect changes in single quantum systems advanced electronic signal processing techniques required to isolate the sensor signal.

The course will provide a basic understanding of quantum systems and the efficient electronic detection of the sensor signals.

The seminar part the course will look into some of the different sensor concepts described in the scientific literature and under investigation in the FH labs.

Quantensensoren sind eine neue Klasse von Sensoren, die entscheidende Vorteile gegenüber konventionellen Konzepten haben. Hier wird ein einzelnes Quantensystem als Sensorelement eingesetzt. Mögliche Sensoren sind hoch-sensitive magnetische oder Gravitationsfeld - Sensoren, die zu Anwendungen im Bereich der Strommessung, chemischen Kern-Spin-Resonanz Analyse oder auch zur Bildgebung in der Medizin. Die Herausforderung besteht in der Detektion der Signale der einzelnen Quanten-Systeme. Hierbei kommen fortgeschrittene Signalverarbeitungskonzepte aus der Elektronik zu Einsatz.

Das Modul gibt einen Einstieg in die Funktionsweise von Quanten-Systeme und die elektronische Detektion von Sensorsignalen.

In dem Seminarteil des Kurses werden unterschiedliche Sensorkonzepte aus der Literatur und Arbeiten der Labore der FH thematisiert.

→ details can be found in course syllabus, recommended study plan etc.

#### 6.1 Requirements for participation in the module

There is a limit of 10 places for students from the electrical engineering department (ETI) and from physical engineering department (PHY), each. Enrollment to Master Photonik, Master Material Science Engineering or Master Elektrotechnik.

Einschreibung in den Master Biomedical Engineering, Master Material Science Engineering oder Master Elektrotechnik Die Anzahl der Plätze ist auf je 10 für Studierende vom ETI und PHY begrenzt.

#### 6.2 Requirements for awarding credit points (e.g. passing final examination, successful accomplishment of assignments in the course of study, regular active participation)

Successful seminar work

Erfolgreiche Teilnahme an der Seminararbeit

<p><b>6.3 Type and extent of examination</b> (e.g. written exam, oral exam, term paper, presentation, portfolio, duration of examination in minutes)</p> <p>The module exam will be one of the following formats: written exam, oral exam, oral presentation or a written paper. The exam format for the current semester will be published in advance by the Fachbereich Elektrotechnik und Informatik.</p> <p>Das Modul wird regelmäßig abgeschlossen durch eine schriftliche oder mündliche Prüfung, Präsentation oder Hausarbeit. Die im aktuellen Semester geforderte Prüfungsleistung entnehmen Sie bitte der Prüfungsliste des Fachbereichs Elektrotechnik und Informatik, die spätestens vor Beginn der Vorlesungszeit des Semesters veröffentlicht wird.</p>
<p><b>6.4 Requirements for admission to examination</b></p> <p>Attendance to the module courses, enrollment in the degree program, register for the examination.</p> <p>Teilnahme an den Modulveranstaltungen, Einschreibung im Studiengang, fristgerechte Anmeldung zur Prüfung.</p>
<p><b>6.5 Weighing of module grade when calculating final grade</b></p> <p>see examination regulations for aforementioned study programmes (line 3).*</p> <p><small>*You will find the examination regulations of all study programmes in the official announcements of the FH Münster: <a href="https://www.fh-muenster.de/hochschule/aktuelles/amtliche_bekanntmachungen/index.php?p=2,7">https://www.fh-muenster.de/hochschule/aktuelles/amtliche_bekanntmachungen/index.php?p=2,7</a>.</small></p>

<b>5 5.1 Intended learning outcomes</b> (What should students be able to do after having accomplished the module? Does the module provide the opportunity to acquire soft skills in addition to professional knowledge? For which other modules and prospective tasks in the labour market are the acquired knowledge and skills relevant?)  <u>Statistische Physik/Statistical Physics:</u> Nach Abschluss des Moduls können die Studierenden die thermodynamischen Größen mittels statistischer Ensembles mikroskopisch berechnen. Die Studierenden sind in der Lage, einfache Verteilungen zu berechnen und in verschiedenen Gebieten der Physik anzuwenden. Grundlagen der Statistischen Physik und Quantenphysik werden erlernt, so dass sie in der Lage sind, sich in aktuelle Gebiete der Materialforschung einarbeiten zu können. Hierzu werden zum einen die Nacharbeit der Vorlesungsmitschriften und das Selbststudium gefördert und zum anderen durch praktisches Programmieren in MATHEMATICA wesentliche Algorithmen vermittelt. After completion of the module, the students can calculate thermodynamic properties with the help of microscopic statistical ensembles. The students will be able to determine simple																																																

distributions and to apply them in different fields of physics. Basic knowledge of statistical and quantum physics will be acquired on the basis of which the students will be enabled to work in modern topics of materials science. To this aim the own work on notes of the lecture will be practiced and the ability for self-responsible study will be learned. Practical exercises and programming with MATHEMATICA allows to become acquainted with main algorithms.

Anwendungen/Applications:

Probleme der Strukturentstehung, Clusterentwicklung, Transporteigenschaften der Festkörperphysik, praktische Programmierbeispiele in *Mathematica*

Problems of pattern formation, development of clusters, transport properties in solid state physics, practical programming examples in *Mathematica*

Specific topic of materials science

**Detailed synopsis – Inhalt/Detail:**

1. Begriff der Entropie, Verteilungsfunktion, Beschreibung von Vielteilchensystemen

Entropy, distribution functions, description of many-particle systems

(i) Berechnung thermodynamischer Potentiale, statistische Verteilung von Molekülen und Photonen

Calculation of thermodynamic potentials, statistical distributions of molecules and photons

(ii) Chaotisches Verhalten von dynamischen Systemen, Zufallsprozesse

Chaotic behavior of dynamical systems, decay processes

(iii) Molekulardynamische und Monte-Carlo Simulation

Molecular dynamics and Monte-Carlo simulations

(iv) Isingmodell, Metropolisalgorithmus, Testteilchenmethode

Ising model, metropolis algorithm, testparticle method

(v) Zelluläre Automaten

Cellular automates

(vi) Perkolation und Clustererkennung

Percolation and cluster recognition

(vii) Wachstum und Strukturentstehung

Growth and pattern formation

2. Einführung in die Quantentheorie

Introduction into quantum mechanics

(i) Konzepte, concepts (ii) Schrödingergleichung, Schroedinger equation (iii) Zweite Quantisierung, second quantization (iv) Quantenstatistik, quantum statistics

3. Eigenschaften und Anwendung der Boltzmann-Gleichung

Properties and application of Boltzmann equation

(i) Hydrodynamische Gleichungen, hydrodynamics equations (ii) Transport in Gasen, Flüssigkeiten, Metallen und Festkörpern, transport in gases, liquids, metals and solid states (iii) Anwendung in der optischen Physik, Biologie, Photonik, applications in optical physics, biology, photonics

4. Materialeigenschaften

Materials properties

(i) Übergangsraten und Auswahlregeln, transition rates and selection rules (ii) Landautheorie der Fermiflüssigkeiten, Landau theory of Fermi liquids (iii) Supraleitung, Bose-Einstein Kondensation,

	<p>supraconductivity and Bose-Einstein condensation (iv) Lokalisierungsphänomene in ungeordneten Systemen. Localization in disordered systems</p>
5	<p><b>5.3 Short information about module</b> (This paragraph [max. 250 characters] will be published on the website of FH Münster to support persons interested in studying at FH Münster to choose the appropriate study programme. Please focus on the main intended learning outcomes and course content, ideally also comprising information about the relevance of the module for the further course of study and the labour market. Please formulate whole sentences, address your (prospective) students directly and avoid technical terms.</p> <p>In this module you will learn to calculate simple distributions and apply them in different areas of physics.</p>
6	<p><b>6.1 Prerequisites</b> (<i>formal</i>: examination of module XY has to be passed or similar <i>content-wise</i>; <i>module XY should have been attended, the following knowledge and skills should have been acquired</i>: ....)</p> <p>Kenntnisse der Fouriertransformation (ab 3. Semester, Mathematik III) Knowledge of Fourier transformation (3d term, Mathematics III)</p>

<b>5 5.1 Intended learning outcomes</b> (What should students be able to do after having accomplished the module? Does the module provide the opportunity to acquire soft skills in addition to professional knowledge? For which other modules and prospective tasks in the labour market are the acquired knowledge and skills relevant?)  <p>After the participation in the module "Solid State Physics and Semiconductors" the students have a basic knowledge of solid state and semiconductor physics which they can apply to any concrete case in materials science. During the seminar you will familiarize yourself with current research areas and how the fundamentals you have learned can be used to solve problems and develop materials.</p>																																														

	<p><b>5.2 Course content</b></p> <p><b>Inhalt/Detail - Detailed synopsis:</b></p> <ul style="list-style-type: none"> <li>- Principles of crystalline structure</li> <li>- Diffraction and reciprocal lattice</li> <li>- Bonding processes</li> <li>- Phonons</li> <li>- Free electron gas</li> <li>- Bandstructure</li> <li>- Semiconductors and doping</li> <li>- Superconductivity</li> <li>- Magnetism</li> <li>- Interaction of light and matter</li> <li>- Physics of surfaces and interfaces</li> <li>- Experimental spectroscopy techniques</li> <li>- Nano structures</li> </ul> <p>→ details can be found in course syllabus, recommended study plan etc.</p>
5	<p><b>5.3 Short information about module</b> (This paragraph [max. 250 characters] will be published on the website of FH Münster to support persons interested in studying at FH Münster to choose the appropriate study programme. Please focus on the main intended learning outcomes and course content, ideally also comprising information about the relevance of the module for the further course of study and the labour market. Please formulate whole sentences, address your (prospective) students directly and avoid technical terms.)</p> <p><b>You will learn the basics of solid state and semiconductor physics which will be applied in various following modules to solve problems in understanding and design of novel materials.</b></p>
6	<p><b>6.1 Prerequisites</b> (<i>formal</i>: examination of module XY has to be passed or similar <i>content-wise</i>; <i>module XY should have been attended, the following knowledge and skills should have been acquired</i>: ....)</p> <p><b>Bachelor's degree in chemistry, physics or related</b></p>

1		Title of Module		Exam Number (HIS-POS/LSF) 21020/ITB.2.0120.O.P.	
		<b>Technology of Coatings</b>			
2		Modulturnus/regular: in <input type="checkbox"/> SoSe/summer term, <input checked="" type="checkbox"/> WiSe / winter term Veranstaltungssprache/n / Language <input type="checkbox"/> Deutsch <input checked="" type="checkbox"/> Englisch <input type="checkbox"/> Weitere, nämlich:		Duration: <input checked="" type="checkbox"/> 1 Semester <input type="checkbox"/> 2 Semester	
3		Course of study:		Elective or compulsory	Offered at semester term
		Master Chemical Engineering		Elective	1 / 3
		Master Materials Science and Engineering		Elective	1 / 3
4		Kontakzeiten -inkl. Prüf. Contact times	Lehrform Form of teaching	SWS	Hrs. per semester SWS x 15 weeks (average)
			Lectures	3	45
			Exercise /On-line Seminar / Excursion	2	30
					Summe Kontaktzeit in Std.  Total Contact time  75 Std.
5		Selbststudium Self-study	Form (z.B. Vor-/Nachbereitung, Prüfungsvorbereitung, Ausarbeitung von Hausarbeiten, Recherche)	Std. pro Sem./Hrs/semester	Total self-study time
			Work on exercises, preparation of presentation, preparation for lectures and exam	105	
					105 Std.
6		Arbeitsaufwand (Workload) ..... Summe Kontaktzeit in Std. + Summe Selbststudium in Std.			180 Std.
		Leistungspunkte (i.d.R. 30 Std. = 1 LP) Credits			6 LP
7		<b>Learning outcomes :</b> The students can explain the basic components for coating materials including paints, colorants, pigments, dyes, additives and polymer binders and the definitions of relevant technical terms. They can apply fundamental physicochemical properties and phenomena of surfaces to describe properties of coatings. They can discuss the development of paints up to typical complete four-layer paint formulations used in automotive industry. They can point out other important applications of coating techniques, e.g. in medicine, optics or electronics. They can distinguish between different coating processes and characterization methods and can identify their advantages and applicability. This includes to assess ecological aspects of automotive paints and processes used today. The lectures will be supported by an on-line seminar where exercises are processed and new developments are discussed in form of presentations by students.			

8	<b><u>Detailed synopsis:</u></b>  1. Introduction Definitions, historical development, economic importance  2. Physicochemical Basics of Coating Technology Wettability, surface tension, adhesion, colloids, interaction of light and matter  3. Paint Chemistry: Components and Formulations Binders, resins, colorants, additives, solvents  4. Coating Deposition Processes Surface pretreatment, spray coating, deposition from solution, electrocoating, chemical vapor deposition  5. Quality Tests Surface analysis methods, color and appearance, mechanical tests  6. Application Examples Automotive, protective, functional, self-repair and medical coatings  7. Future trends New materials for improved sustainability and environmental compatibility
9	<b><u>Requirements for participation in the module:</u></b> Bachelor degree in chemistry, chemical engineering, physical engineering or closely related.
10	<b><u>Requirements for awarding credit :</u></b> Pass the exam, on-line presentation
11	<b><u>Forms of examination and audit scope:</u></b> Written exam (90 minutes) or oral exam (45 min)
12	<b><u>Requirements for admission to the examination:</u></b> Enrollment in the programme, registration for examination (via LSF)
14	<b><u>Course leader:</u></b> Prof. Dr. Michael Schäferling
15	<b><u>Additional teacher:</u></b> Prof. Dr. Reinhard Lorenz
